

CONTROL VEHICULAR ARGENTINO

**TOOL DEVICE TIRE HOIST
(For cars and SUVs).**

TOOL DEVICE

Function:

Our long-standing work in the mechanical service market has prompted us to develop a new device that meets the needs of the modern mechanic shop. This device solves the tedious task of lifting and replacing ever heavier SUV tires, in the hoists.

This also helps avoiding staff injuries and problems.

It is also a powerful assistance unit for the mechanic man, providing an air connection and last generation equipment for vacuum fluid extraction. In addition, the unit comes with a tool holder and shelves designed to facilitate current mechanic's work. It is mobile and is fitted with brakes on its wheels.

CHARACTERISTICS

- 04 pneumatic tool connection hoses each with fast coupling connector.
- Pneumatic piston with anchoring to place 13" to 19" tires
- Pressure regulators for lifting and lowering
- Bidirectional control for pneumatic piston
- Piston stroke: 500 mm downwards/upwards
- Tool tray for improved work organization
- 01 Pressure gauge for pressure supervision
- Testing speed: 3 seconds.
- 360° rotation capacity for upper part
